RxExpress: **Nov 2024 to Feb 2025**

Frontend Developer   **CIRROLIX Tech (Remote)**

- Developed a feature-rich React Native application for seamless healthcare service delivery.
- Integrated advanced navigation using React Expo Router for an intuitive user experience.
- Designed and implemented responsive UI components, enhancing user engagement.
- Collaborated on testing and debugging to ensure a smooth and efficient app experience.
- Applied expertise in React Native Toolkit to optimize performance and maintainability.

Application link: **RxExpress**

React Native Banking Apps: Feb 2024 to April 2024

React Native Developer   **Venture Dive (Contract)**

- Developed and optimized user interfaces using React Native Toolkit.

- Implemented atomic design principles, working with atoms and molecule structures for a modular and scalable UI.

- Conducted thorough unit testing to ensure code quality and reliability.

- Collaborated with the design and backend teams to ensure seamless integration and user experience.

- Focused on delivering a responsive and high-performance app for both iOS and Android platforms.
  Application Link: AlinmaPay E-Wallet

Boxing TV App: Feb 2024 to April 2024

React Native Developer   **Venture Dive (Contract)**

- Developed and deployed a comprehensive boxing TV app using React Native.

- Collaborated with cross-functional teams to design and implement user-friendly interfaces.

- Integrated real-time data and streaming capabilities for live Boxing matches.

- Ensured high performance and responsiveness of the app across both iOS and Android platforms.

- Conducted thorough testing and debugging to maintain a seamless User experience.

- Utilized state management libraries like Redux for efficient state Handling.

- Implemented user authentication and secure data storage solutions.

- Delivered the project on time and met all specified requirements and quality standards.

Pak Loaders   June 2022 to Aug 2023

React Native Developer   **TKlogics**

- In a Driver-like mobile app with some unique features that will serve in the **MERN Stack Develop** a different way.

- Some collections of technologies that were used were from September 2022 to June 2023 **Mapbox, Firebase push notifications, Chat, and payment methods**. Worked on an In Drive-like app using

Chill Madness   Feb 2022 to April 2022

WordPress   E-Bridge Software

- As a WordPress developer, I'm working on different web applications.
- The idea is to make it a product search engine that E-Bridge Software would hold every information of products or services and people could use WordPress Developer
reach it out easily by having its exact location or buying it online.

Link: **Chill madness**

Web application   **June 2020 to March 2021**

Web design & development Course   Ali Technical institute

- I worked on an interface to interact with the user Interface website and APIs for safe user interaction.

- Worked on a multivendor website for a local client.

- I gain valuable experience in building dynamic and scalable websites.

University Project

PDF Editor - User Panel
Academic Project

Developed a user-friendly PDF editor web application that allows users to upload, view, edit, and download PDF documents. Integrated features like text editing, page rearrangement, and annotation using modern JavaScript libraries. Hosted the complete project on GitHub.

Interests and hobbies

Machine Learning, Artificial Intelligence, Web 3, Block chain
